

Join the leading light!

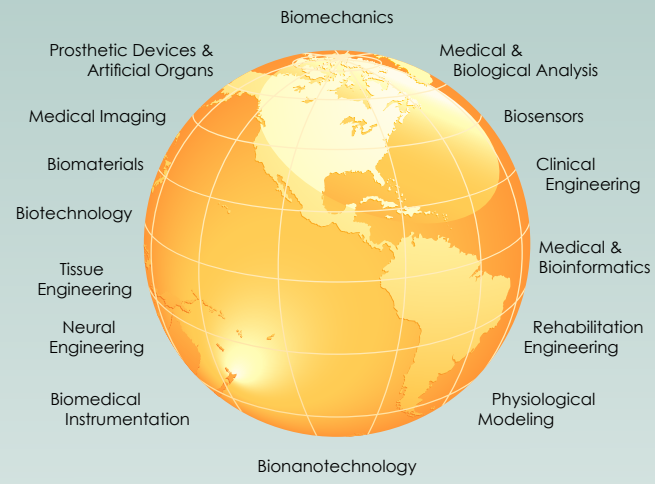

BEACON is an organization that gives *engineers, academics, students, clinicians, businesses, entrepreneurs, lawyers and innovators* access to a full complement of resources:

- Consulting services for new/small business development.
- Guidance for innovators on how to get an idea launched, protected, purchased or licensed.
- Academic support to learn more about the medical device industry.
- Networking services for collaborating and partnering.
- Programs & seminars dedicated to bringing you the future of biomedical engineering.

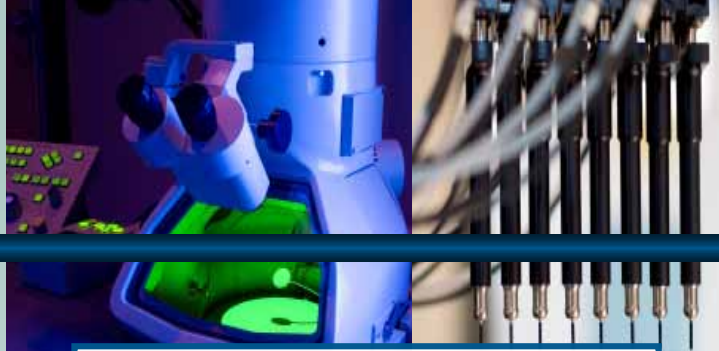

BEACON is a single source for these benefits and more! Join today and see what we can do for you. Call us at **1.877.723.2266** or email info@beaconalliance.org.

Biomedical Engineering is the 21st century's odyssey

Biosensors. Medical Instrumentation. Artificial Organs. Tissue Engineering. Rehabilitation Engineering. BEACON is your guide through the unexplored waters of new technology and science. We facilitate the science as well as the economics of innovation. Providing guidance, resources, and expertise to assist you on the journey from idea to commercialization.

discovery

Success of any kind is seldom the result of a single action. In the bioengineering field, turning an idea into a product requires enormous resources as well as highly trained minds in several disciplines -- a synergy that's hard to come by from within a single organization. BEACON is all about synergy and efficient use of resources. Our success depends on scientific ingenuity and real clinical applications, as well as corporate commitment and conformity to a stringent code of ethics. The distinguished names currently on our membership list include **academic institutions, medical centers, major corporations, law firms and financial institutions.** In steering collaboration between a diversity of experts, we are helping form a crossroads where ideas, invention and industry can meet today -- and advance technology's next wave.

BEACON endeavors to:

- Continually develop a network that gives our members access to the expertise and resources within the BEACON community.
- Promote collaborative research and partnerships among our academic, medical and industry partners in the field of biomedical engineering.
- Facilitate the development of new medical device companies by assisting academics and clinicians in developing their business plans and obtaining funds.
- Provide educational opportunities through seminars and programs that improve understanding and foster the acquisition of specific knowledge and expertise.
- Build bridges to other organizations interested in biomedical research and development.

BEACON (the Biomedical Engineering Alliance & Consortium) is a non-profit 501(c)(6) trade organization comprised of academic and medical institutions, as well as corporations and entrepreneurs dedicated to the development and commercialization of new medical devices and technology. To find out more, contact us at **877.723.2266**, or visit us at www.beaconalliance.org.
